What is the Hippolib® ?

Hippolib® is an educational saddle module resulting from collaboration between the equestrian and disability sectors. It offers a safe way for people with reduced mobility to (re)practise horse riding.

Who carried it out ?

The research was carried out in collaboration between **ENE** (French National Riding School) and **CAIPS** (Centre for Image Analysis and Sports Performance), and funded by the **French Ministry of Sport**. A rider from the **Cadre Noir de Saumur** and a disabled rider took part in the development, testing the prototypes. Manufactured by **Janton**, a company that has specialised in the disability sector since 1945, Hippolib® represents an innovation at the service of the equestrian industry.

Who is it for ?

Adapted riding offers significant advantages to **people with reduced mobility**, in particular **paraplegics**, people with **multiple disabilities**, and those with **mental or psychological deficits**.

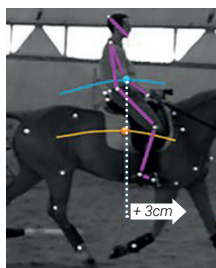

Why ?

«The first quality of the Hippolib® equipment was to minimise the gap between CoG¹ horse and CoG¹ rider, and thus avoid having to train the horse to accept the particular position of its disabled rider».

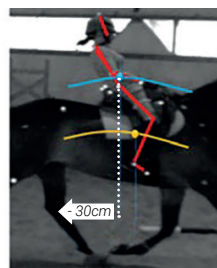

Source: ©IFCE - «Accessibility modular equipment for horse riding and canoeing for people with disabilities» by François DURAND, (CREPS de Poitiers) - 2020.

¹CoG: centre of gravity.

Longitudinal offset

Able-bodied rider

Disabled rider

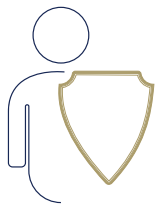

Hippolib® offers the possibility of making rapid adjustments to depth, height and inclination, ensuring optimum synchronisation between horse and rider

The pelvic support ensures optimum support for the rider

The ergonomic backrest adjusts to the rider's body shape

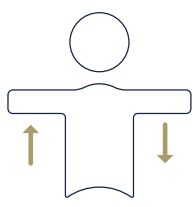

Hippolib®, an optimised solution

Hippolib® was validated by a study carried out in 2012 by H  l  ne Casal, a student in rehabilitation, disability and motor performance engineering, under the supervision of the Centre for Image Analysis and Sports Performance (CAIPS).

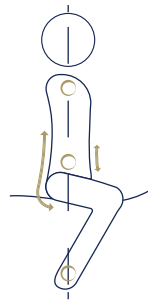

Safety

- ✓ Optimum support
- ✓ Automatic rider release in case of an emergency

Seat

- ✓ Validated by a two-dimensional kinematic study
- ✓ Help to develop the balance

Positioning

- ✓ Back and belly support adaptable to the rider's morphology
- ✓ Allows posture alignment : shoulders, centre of gravity, heels

Installation

- ✓ Quick and easy to install
- ✓ Module compatible with most English saddles
